

# ***Android Application Proposal***

***Subject:*** Mobile Application Development - 21JANMNCO2

***Team Members:*** Fenil Patel, Taral Patel

***App:*** News App

## ***Description:***

We are going to build a news app using Java programming language, which will be android compatible. We will use any of the publicly available free API for this app.

## ***Main Features:***

- App will have home page where user will be able to see main news feed in grid.
- App will have different categories of news which will enable users to browse from various categories such as entertainment, sports, technology, lifestyle, science, and more.
- App will have detail feed page where user will be able to read more information about that news.

### ***Possible Addition:***

- App will have splash screen.
- App will have hamburger menu.
- App will have personalized settings feature where user will be able to change different settings according to their preference.
- App will have search bar where user will be able to search news.
- App will have bookmark feature.
